Abstract (Basic): DE 29806392 U

The telephone housing (1) carries a display (2), a keyboard (3), an earphone (4), a microphone (5) and at least one additional device such as a light source (7). The light source enables the telephone to serve also as a torch, actuated either by an operating switch (6) or by a particular keypad depression.

In another arrangement, an optically-based motion sensor can be provided to enable the telephone to act as an alarm. Alternatively, the additional device can be a clock with alarm and/or stopwatch functions, or a magnetic compass. The accessory items can be powered from the telephone battery itself or by an additional battery specifically provided for the purpose.

USE - Additional features for cordless or other portable telephone.

ADVANTAGE - By also performing several non-telephone functions, reduces number of devices which need to be carried by user.
